

## Objectives:

We are excited to hear about your project and the potential for collaboration. If your idea meets all the criteria listed below, we would be delighted to consider it for review. Our policy is to select projects that align with our mission and governance principles. Examples of projects we may implement include solar-powered facilities that directly enhance the quality of education, sports grounds, tech labs, and more.

## General Principles for Project Consideration:

### 1. Goal:

The proposal, of infrastructure nature, should be dedicated to accessing (or materially improving access) education or enhancing community educational development.

### 2. Lasting Impact:

Any project must provide and demonstrate lasting solution(s) to a recurrent pressing issue(s).

### 3. Sustainability:

Continued success after the implementation phase is critical to our projects. A detailed plan for covering operating expenses and any other necessary aspects must be presented.

### 4. Underserved Communities & Wider Reach:

The project must serve communities that are most in need. Priority is given to propositions that benefit the largest possible number of recipients.

### 5. Skin-in-the-game:

The recipient must be willing to contribute to the cost of the project through a minimum percentage being financial or in-kind.

**We thank you for reaching out!**
